

Why an Enterprise Authority Layer?

Native controls are essential. Tegrix connects authority across them.

Enterprise need	Native platform controls	Tegrix
Agent estate	Govern agents within the platform	One inventory across platforms and custom runtimes
Authority	Platform-specific permissions and controls	One Authority Envelope for consequential actions
Enterprise context	Native platform context	Trusted context across IAM, ITSM, finance, security, and business systems
Human authority	Varies by platform	Consistent approval, separation of duties, and authority semantics
Evidence	Platform-specific logs	One evidence model from request through decision to execution

TEGRIX - Enterprise Authority Layer
Authority Envelope -> Runtime Decision -> Evidence Ledger

Tegrix does not replace native controls. It makes enterprise authority consistent across them.
